## TESTIMONIAL/FEEDBACK For REDF

We have been using the REDF ( Radial Edge Disc Filter) system for our application of filtration of Ammonium Chloride . The REDF system was installed in September 2022 and has proven to have specific benefits for efficiency, clarity and cost effectiveness etc for our product.

The back washable design has significantly reduced operational costs, labor requirements and down time. Its ability to provide clear filtration in single pass has made it an indispensable part of our process.

We appreciate the innovative technology and reliable support and after sales service provided by **SS Filters Pvt Ltd** and look forward to continued collaboration
